

Patient Health Record

The Kentucky Health Information Exchange (KHIE) has enabled patients to electronically upload their health information via the Patient Health Record (PHR). The PHR satisfies the requirements for objectives in both Stages 1 and 2 of Meaningful Use of the EHR Incentive Program.

How it Works

With access to KHIE's PHR, patients can upload all relevant personal health information and communicate securely with their physicians and other healthcare providers.

KHIE's PHR also satisfies the consumer engagement requirements for Meaningful Use:

- ⇒ Patient Electronic Access—Provide patients the ability to view online, download, and transmit their information
- ⇒ Secure Electronic Messaging—Eligible Providers will use secure electronic messaging to communicate with patients on relevant health information.
